DETAILED ACTION

Election/Restrictions

1. Applicant's traversal is on the ground(s) that the inventions are similarly classified. This is not found persuasive because the new claims contain limitations directed towards a tool with a barrel assembly including two separate portions and a resilient element in-between divergent from the subject matter previously claimed creating a burden on the examiner.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 14 and 36 are rejected under 35 U.S.C. 102(e) as being anticipated by Hirtl et al. (US 5,884,828).

Hirtl et al. disclose an explosively operated tool comprising housing 1, barrel assembly 4, piston 6, recoil mass/dampening device 17 for absorbing recoil, braking elements 14 and 15; spring 23 is a part of the resetting mechanism which returns piston

6 to its original position and independently from braking elements 15 and 10; see column 4, lines 3-6.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2-7, 16-18, 33-35, and 37-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hirtl et al. (US 5,884,828) in view of Jochum et al. (US 5,538,172).

Hirtl et al. do not directly disclose a engaging means for engaging the piston in a forward position and displacement means for rearwardly displacing the engagement means to thrust the piston rearwardly, however Jochum et al. teach means for moving piston to the rearwards position comprising engagement means 10; potential energy source 10 and recoil/resetting housing 8. Jochum et al. directly teach gripping means comprising balls 10 and inclined surface of flexible cage/leaf spring 11 for gripping piston 1 which are thrust rearwardly and forcing piston 1 back with the recoil of housing 8.

It would have been obvious to one of ordinary skill in the art to combine the teachings of Jochum et al. with the invention of Hirtl et al. in order to provide for a gripping means for arresting/returning the piston.
